(54) **COSMETIC STORAGE CONTAINER**

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a container simply controlling a proper quantity of cosmetic to be used, hardly causing clogging, and having high airtightness by sealing the opening face of the container with a resin film, superimposing a mesh body on the surface of the resin film, and forming multiple cosmetic outflow sections on the resin film.

SOLUTION: The opening face of a container 1 storing a liquid cosmetic is sealed with a resin film 2, and a mesh body 3 is superimposed on the surface of the resin film 2. Multiple cosmetic outflow sections 4 are formed on the resin film 2. The shape, size, position, and opening area of the cosmetic outflow sections 4 are adjustably selected for the required outflow quantity in consideration of the nature, fluidity, and volatility of the stored liquid cosmetic. The cosmetic flowing out from the cosmetic outflow sections 4 seeps on the surface of the mesh body 3 superimposed on the resin film 2 and it can be collected on a proper coating tool such as a brush for use. The container 1 is preferably formed into a deformable structure.
